sgapiSubmitSurvey()

This function submits the data from the current page and records the response as a partial. All data from previous pages will be stored for reporting.

Note: this will **not** submit the current page and move to the next. To do that, use sgapiJumpToPage .

Example

This one is super easy! Just include this single line of code to submit the current page's data and mark the response as partial. Custom Script actions are run when the page is displayed.

```
sgapiSubmitSurvey();
```
