sgapiSetTitle(%%questionID,%%value,%%language)

Last Modified on 01/12/2016 5:26 pm EST

This function sets the title of a question. HTML is allowed.

The %%language parameter is a required parameter. The values are the languages available in the translation menu. Languages must be title case, for example, %%language = "Spanish".

Example

Here, we demonstrate how to change the title of a question according to how a previous question was answered. Similar functionality can be achieved using merge codes.

[Check it out in an Example Survey.](#)

```
%%sourceID = 2; //The question that was answered
%%targetID = 3; //The question that we will change

if (sgapiGetValue(%%sourceID) == "no")
{
    %%value = "Why didn't you like your ice cream?";
}
if (sgapiGetValue(%%sourceID) == "yes")
{
    %%value = "Why did you like your ice cream?";
}

sgapiSetTitle(%%targetID,%%value);
```
