

sgapiSetRequired(%%questionID, true/false)

Last Modified on 08/06/2014 1:22 pm EDT

This function toggles the required status of a question.

Example

In this example, if no questions were answered on page ID 1, then question ID 4 is required. In case the respondent goes back and answers a question on page ID 1, the script will un-require the question.

```
%%numberAnswered = sgapiQuestionsAnsweredOnPage(1);  
  
if (%%numberAnswered == 1)  
{  
    sgapiSetRequired(4,true);  
}else{  
    sgapiSetRequired(4,false);  
}
```
