sgapiListReplace(%%surveyID, %%reponseID, %%array)

Last Modified on 04/03/2014 12:43 pm EDT

This function replaces the given response for the given survey with the array items. This is equivalent to updating a SurveyResponse object via the RestAPI. To learn more visit the SurveyResponse API Object documentation.

Example

In this example the value of question id 3 (specified in the array index) of response 1 in survey 1234567 is replaced with the data from question id 4 of the survey with the script.

```
%%surveyID = 1234567;
%%responseID = 1;
%%array[3] = sgapiGetValue(4);

sgapiListReplace(%%surveyID, %%responseID, %%array);
```
