

sgapiExplode(%%delimiter, %%string, %%limit)

Last Modified on 01/30/2015 4:31 pm EST

This is equivalent to the [explode](#) function in PHP. Given a %%string it will create an array breaking the string up by %%delimiter. Limit is optional. If set, the returned array will only contain up to %%limit elements.

To see an example or learn more other PHP functions and PHP programming, visit [PHP Documentation](#).
