sgapiPrint_R(%%mixed)

Last Modified on 01/30/2015 4:31 pm EST

This is equivalent to the print_r function in PHP. Given any variable sgapiPrint_R will display information about a variable in a way that is readable by humans. Use with %%output to output to the page. Very useful when looking at arrays of data or objects.

Example

In this example, we return the value(s) of a checkbox question using sgapiGetValue() and sgapiPrint_R()

Check it out in an Example Survey

```
%%output .= sgapiPrint_R( sgapiGetValue(2) );
```
