

# sgapiASort(%%array, %%flag)

Last Modified on 01/30/2015 4:31 pm EST

This is equivalent to the [asort](#) function in PHP. This function sorts an array such that array indices maintain their correlation with the array elements they are associated with. This is used mainly when sorting associative arrays where the actual element order is significant.

Using the optional %%flag you can modify the behavior of the sort. The default is "SORT\_REGULAR". See the PHP documentation for [sort](#) to learn more about %%flag options.
