

sgapiStrCaseCmp(%%str1,%%str2,%%case=false)

Last Modified on 01/30/2015 4:32 pm EST

This is equivalent to the [strcasecmp](#) function in PHP. This function will compare %%str1 with %%str2 in a case-insensitive manner when %%case=false. The results are returned as either a negative number (str1 < str2), 0 (match), or a positive number (str1 > str2).

When %%case=true this is equivalent to the [strcmp](#) function in PHP, which is not case sensitive.
