sgapiImagePDF(%%pdf, %%image, %%pad, %%width, %%resize, %%just, %%border)

This function adds an image to the given PDF.

Parameters

- **%%pdf** - The title of the PDF you are creating.
- **%%image** - The image URL.
- **%%pad** - Image padding by page unit (defaults to 5). Enter '0' for no padding.
- **%%width** - The width of the image on the page (defaults to 0).
- **%%resize** - Can be 'full','width','none'.
- **%%just** - The horizontal position of the image.
- **%%border** = array () - See PHP PDF Creation documentation for border options.

For more info on PHP PDF Creation visit:https://github.com/rospdf/pdf-php/blob/master/readme.pdf

Example

The below script creates and builds a PDF object, outputs it and adds it as an attachment to a send email action. In the highlighted portion of the script we specify the URL of the image to be added to the PDF.

Check it out in an example survey

OR

```
%%pdf = "Example PDF";
%%text = "Text to include in PDF";
%%size = 14;
%%options = array('spacing' => 1.5);
%%table = array( array(1,2,3,4), array(5,6,7,8), array (9,10,11,12)
);
%%columns = array('Column A','Column B','Column C','Column D');

sgapiNewPDF(%%pdf,'letter','portrait');
sgapiSetFontPDF(%%pdf,'courier');
sgapiSetColorPDF(%%pdf,0,0,0);
sgapiImagePDF(%%pdf,"https://surveygizmolibrary.s3.amazonaws.com/li
rary/160589/surveysoftwareapi.png");
sgapiTextPDF(%%pdf,%%text,%%size,%%options);
sgapiTablePDF(%%pdf,%%table,%%columns,'Table Title');

%%formattedpdf = sgapiPDFOutput(%%pdf);

%%attachment['example.pdf'] = %%formattedpdf;

//Attach to existing send email action (ID 3)
sgapiSetQuestionProperty(3,"email_attachments",%%attachment);
```
